

WATER INSOLUBLE Non-IONIC GRAFT COPOLYMERS**Abstract of the Disclosure**

- 5 A non-ionic graft copolymer has a hydrophobic backbone and non-ionic, hydrophilic side chains having a molecular weight of at least 500, preferably 100-2000 is substantially insoluble in water, but soluble in an aqueous vehicle, and is particularly suited for use in aqueous coating compositions in which water comprises no more than 80% by weight of the vehicle for the composition.

Graft Copolymer
